## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 8-9, 13-14, and 17, drawn to a system, method, program, and computer executable program for screening nucleotide sequences involving evaluating stored target nucleotide sequence data without a network, classified in class 702, subclass 19.
- II. Claims 4-7, 10-12, 15-16, and 18, drawn to a system, method, program, and computer executable program for screening nucleotide sequences involving designating a partial short chain sequence and evaluating complementary sequence data on the basis of every partial sequence, classified in class 707, subclass 3.
- III. Claim 19, drawn to a server comprising a unit for sending and receiving target designation data utilizing a network, classified in class 707, subclass 102.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods/systems/programs, restriction is deemed to be proper because these methods/systems/programs appear to constitute patentably distinct inventions for the following reasons: Groups I-III are directed to methods/systems/programs that recite structurally and functionally distinct elements, are not required one for the other, and/or achieve different goals/steps. Group I involves evaluating

Art Unit: 1631

target nucleotide sequence data without a network or server that is not required by any other group. Group II requires designating a partial short chain sequence and evaluating complementary sequence data on the basis of every partial sequence that is not required in any other group. Group III utilizes a server comprising a sending and receiving unit utilizing a network that is not used in any other group. These distinct methods/systems/programs are often separately characterized and published in literature and would add undue search burden if they were all examined together. Thus, they are considered distinct invention types for restriction purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
